

Benefits of Scheduled Service TEN Group

Energy utilities and contractors make **large investments** in tools and equipment that can cost millions of dollars each year. Significant resources are allocated to asset maintenance programs for the network, however the tools and equipment used in construction and maintenance are often overlooked for scheduled servicing.

Scheduled servicing **extends the life of tools**, minimises unplanned downtime and reduces tool lifetime costs. Servicing tools and equipment extends the useable life of the tool by replacing worn components before a failure or fault occurs. Replacing a low cost seal on a hydraulic tool could be the difference between getting a job done and costly delays. Repairing a damaged tool is almost always more costly than undertaking the regular maintenance and service of that tool.

“Field maintenance can affect manufacturer’s warranties and create additional safety hazards”

A regular maintenance schedule allows you to plan and manage downtime and reduces the likelihood of unplanned downtime as a result of tool failure. Service work can be carried out at a time when the tool is not required. **TEN offers loan tools** where available and this can all but eliminate any downtime for a depot or truck with only one available tool

An additional service which can provide substantial benefit to utilities is tool and equipment **refurbishment**. Most tools and equipment needs to be kept in good order for it to remain operational. Take the case of fibreglass sticks, damaged, worn or scratched sticks must be removed from service as they can be a hazard to operators. Refurbishing a stick can extend its life and minimise expenditure in purchasing.

Below are examples of common damage to sticks we see in our service area.

Repairable

Scratched

Sun Damaged

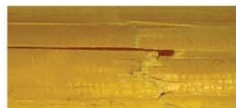

Abrasions

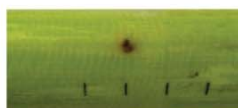

Mistreated

Non-Repairable

Cracked

Burn

Split

Large Chip

TEN Service & Repair Capabilities

- Hydraulic Battery & Hand Tools
- Hoists – Web Strap and Wire Rope
- Fibreglass Stick Refinishing
- Jumper/ Bonders Refurbishment
- Transmission Stringing Equipment
- Sheave/Roller Refurbishment
- Test Equipment
- Earthing Set Refurbishment
