

LiveTester Proximity Detector - Starlogixs

Part No. LT-220

The LT-220 non-contact voltage detector identifies energised or de-energised conductors.

LiveTester is a technological breakthrough in non-contact voltage detectors. By utilizing state-of-the-art electronic circuitry, StarLogixs has developed a completely new design in voltage detection equipment.

Static Discriminator technology exclusive in LiveTester provides more reliable detection on low voltage ranges, and now means no more false alarms. This makes LiveTester the first non-contact voltage detector suitable for line work and detecting pole leakage. This is due to the unique circuitry that allows it to ignore electric fields not generated by a mains source such as powerlines.

- Patented ferro electric detector
- Electronic touch-pad
- Self test function tests internal circuitry and audio visual features
- Auto power off
- Operator feedback - both audible and visual
- Low battery indication
- Water resistant IP 65 and impact resistant
- All models 50Hz
- Universal & shotgun adapter
- 3 x "C" size batteries required
- Supplied with canvas protective storage/carry bag

Part No.	LT-220	LT-220-K
Description	Tester Only	Tester with bag
Test Range (kV)	240V - 220kV	
Warning Signals	Audible and visual indicators	

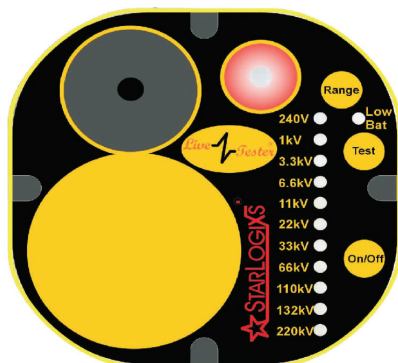

Static Discriminator - Ignores electric fields not generated by a mains source such as Powerlines

Supplied with bag
Part No. TENM445

LT220 Detection Face

Electronic touchpad includes
11 range settings from 240V to 220kV
